bravo180s

BRAVO 180S SERIES COMPUTER CROP SPRAYING

CE

46718XXXX

Software rel. 1.6.x

INSTALLATION, USE AND MAINTENANCE

⚠	= **Generic danger**		= **Indications for crop SPRAYERS**
✋	= **Warning**		= **Indications for multi-row SPRAYERS**
!	= **Displayed error message**		= **Indications for ORCHARD SPRAYERS**
📌	= **Menu visible only with specific settings: to view it, enable one of the indicated options.**		
📖	= **Page / paragraph reference**		

This manual is an integral part of the equipment to which it refers and must accompany the equipment in case of sale or change of ownership. Keep it for any future reference; ARAG reserves the right to modify product specifications and instructions at any moment and without notice.

• MANUAL FOREWORD AND USE

This manual provides instructions to assemble, connect and set the computers of the BRAVO 180S family.
Any other information is provided in specific sheets to be used exclusively by the installer, containing specific information of each computer model.

• MANUAL USE MODES

The section of this manual dedicated to the installation contains information for installers. For this reason we have used technical terms without providing explanations which would be necessary for end users only.
THE INSTALLATION MUST BE CARRIED OUT BY AUTHORISED AND SKILLED PERSONNEL ONLY. THE MANUFACTURER IS NOT RESPONSIBLE FOR ANY OPERATION SPECIFIED IN THIS MANUAL CARRIED OUT BY UNAUTHORISED OR UNSKILLED PERSONNEL.

• LIMITATIONS

The descriptions of the assembly phases refer to a "general" computer, so specific models will not be mentioned, unless a certain installation procedure concerns exclusively one computer type.

• RESPONSIBILITY

The installer must carry out workmanlike installations and ensure to the end user the perfect operation of the whole system both with ARAG components only and other brands' components.

ARAG always recommends using its components to install control systems.
The installer will be held responsible for any malfunction if he decides to use other brands' components even without actually changing the system parts or harness.
The compatibility check with components and accessories of other manufacturers shall be carried out by the installer.
If the computer or the ARAG components installed together with other brands' components get damaged because of what stated above, no direct or indirect warranty will be provided.

1   PRODUCT DESCRIPTION

The device you have purchased is a computer which, when connected to a valve or suitable control unit, makes it possible to control all phases of treatment in agricultural applications directly from the cabin of the farming machine it is installed in.

These computers can be connected to different sensor types.
The computer is directly connected to the system by means of two cables connected to the hydraulic and control unit valves and the sensors. In the cabin you find all controls necessary to manage the system ensuring great safety during the job.

The BRAVO 18x computer display allows the operator to constantly monitor all data of the current operations, such as vehicle speed, sprayed fluid quantity, the whole sprayed area and so on.

2   BRAVO DSB

ARAG has designed and manufactured a diagnostics system for Bravo series computers and the systems they may be connected to.
BRAVO DSB (**code 467003**) provides reliable diagnostics of computer, control unit or the whole system troubleshooting any potential problems experienced with the BRAVO DSB system.

3   RISKS AND PROTECTIONS BEFORE ASSEMBLY

All installation works must be done with battery disconnected, using suitable tools and any individual protection equipment deemed necessary.

⚠ **Use ONLY clean water for treatment tests and simulations: using chemicals during simulated treatment runs can seriously injure persons in the vicinity.**

4   INTENDED USE

CE **This device is designed to work on agricultural machinery for spraying and crop spraying applications.**
The machine is designed and built in compliance with UNI EN ISO 14982 standard (Electromagnetic compatibility - Forestry and farming machines), harmonized with 2004/108/EC Directive.

5   PRECAUTIONS

⚠
- **Do not aim water jets at the equipment.**
- **Do not use solvents or fuel to clean the case outer surface.**
- **Do not clean equipment with direct water jets.**
- **Comply with the specified power voltage (12 VDC).**
- **In case of voltaic arc welding, remove connectors from BRAVO and disconnect the power cables.**
- **Only use ARAG genuine spare parts and accessories.**

6   PACKAGE CONTENT

The table below indicates the components that you will find in the BRAVO computer package:

BRAVO 180S COMPUTER

Legend:
1 Bravo 180S
2 Instruction manual (DVD-ROM)
3 Power cable
4 Fixing kit
5 Power supply connector
6 Valve and sensor harness
7 Inductive speed sensor
8 Section valve connector seals

Fig. 1

BRAVO 180S COMPUTER WITH HYDRAULIC CONTROLS

P	Control valve
1÷5	Section valves
E	Hydraulic unit

INTENDED APPLICATIONS
Fig. 5

The computer must be directly connected to the farming machine battery.
* Do not connect the computer to key-operated switch (15/54).

7.2 Computer positioning

• The BRAVO 180S series computer must be placed in the control cabin of the farming machine. Observe the following precautions:

⚠ **- Do NOT install the monitor in areas where it would be subjected to excessive vibrations or shocks, to prevent any damage or accidental use of the control keys;**
- Install the device in a visible position within easy reach by hand; bear in mind that the monitor should not obstruct the operator's freedom of movement or block his view.

✋ **Consider all necessary connections of the computer, the cable length, and make sure there is enough space for connectors and cables.**
An identification symbol is located next to each connector to indicate its function. For any reference to the system configuration read par. 7.1 System recommended composition.

5	•	•	222
7	•	•	268

7.3 Bracket fixing

The monitor must be mounted after having fixed the bracket at the desired location (the previous paragraph shows the bracket drilling template).
The bracket must be slid out of the monitor seat (**A**, Fig. 8) and fixed using the supplied screws (**B**).
Make sure the bracket is securely mounted, fit the monitor on it, and push it until it locks in place (**C**).

Fig. 8
7.4 Control unit position

The control unit must be fixed with the special brackets supplied and fitted to the unit, positioning it as shown in the manual provided with the assembly.

⚠ **MAKE SURE TO FOLLOW ALL THE SAFETY INSTRUCTIONS GIVEN IN THE CONTROL UNIT'S MANUAL.**

7.5 Hydraulic unit positioning

The hydraulic unit shall be secured to the machine, making sure it is well protected against the elements and the fluid sprayed by the machine.

✋ **ARAG IS NOT LIABLE FOR ANY DAMAGE RESULTING FROM THE INSTALLATION BY UNSKILLED PERSONNEL. ANY SYSTEM DAMAGE CAUSED BY A WRONG INSTALLATION AND/OR CONNECTION AUTOMATICALLY VOIDS THE WARRANTY.**

⚠ **WARNING! DO NOT CONNECT HYDRAULIC UNITS OTHER THAN THE SPECIFIED ONES (SEE ARAG GENERAL CATALOGUE). ARAG IS NOT LIABLE FOR ANY DAMAGE TO THE PRODUCT, MALFUNCTION ERRORS AND ANY KIND OF RISK IF THE MODULE IS CONNECTED TO NON ORIGINAL UNITS OR UNITS NOT SUPPLIED BY ARAG.**

8   COMPUTER CONNECTION TO THE FARMING MACHINE

8.1   General precautions for a correct harness position

• Securing the cables:
- secure the harness so that it does not interfere with moving parts;
- route the harnesses so that they cannot be damaged or broken by machine movements or twisting.

• Routing the cables to protect against water infiltrations:
- the cable branches must ALWAYS be faced downwards (see figures below).

DIRECT CONNECTION

Fig. 9

Fig. 10
• Fitting the cables to the connection points:
- do not force the connectors by pushing too hard or bending them: the contacts may be damaged and computer operation may be compromised.

Use ONLY the cables and accessories indicated in the catalogue, having technical features suitable for the use to be made of them.

8.2   Power supply connection

The package includes the power connector (Fig. 1 and Fig. 2 on page 6) to be connected to the farming machine battery; Fig. 13 shows the drilling template of the power connector.
Connect the power connector to the battery wires using two 6-mm faston connectors, as indicated in Fig. 11 and Fig. 12.
Use the cable provided with the package (Fig. 1 and Fig. 2 on page 6) to connect the computer to the power supply.

Fig. 11

Fig. 12

Fig. 13
Ø 5
= 46 =
Ø 26
⚠ **WARNING:**
To avoid short circuits, do not connect the power cables to battery before the installation is completed.
Before powering up the computer and control unit, make sure the battery voltage is as specified (12 Vdc).

BRAVO 180S is supplied directly by the farming machine battery (12 Vdc): ALWAYS switch on the computer through the monitor, and then remember to switch it off using the specific key on the control panel.

✋ **If BRAVO 180S remains on for a long time with the machine off, the tractor battery could run flat: in case of prolonged breaks of the machine with engine off, make sure the computer is off, too.**

The power source must be connected as indicated in Fig. 14: **the computer must be connected directly to the farming machine battery. DO NOT connect the computer to key-operated switch (15/54).**

Fig. 14
15/30
31
+   +
FUSE
10 A
+   −
12V
⚠**WARNING:**
• The power circuit shall ALWAYS be protected by a 10 A fuse like the ones for automotive applications.
• All cables connected to the battery shall have a minimum cross-section of 2.5 sq. mm.
To avoid short-circuits, connect the power cable connector only after completing installation.
• Use cables with suitable terminals ensuring correct connection of all wires.

9 HARNESS CONNECTION TO THE CONTROL UNIT, THE HYDRAULIC UNIT AND THE AVAILABLE FUNCTIONS

⚠️ • **Use only the cables provided with the ARAG computers.**
• **Take care not to break, pull, tear or cut the cables.**
• **Use of unsuitable cables not provided by ARAG automatically voids the warranty.**
• **ARAG is not liable for damages to the equipment, persons or animals caused by failure to observe the above instructions.**

9.1 Multicore cable connection

Connect the multicore cable to the monitor (connections 1 and 2 on page 9) and the other cable end to the control unit and the hydraulic unit. Ensure it is correctly in place and turn the ring nut clockwise until blocking it.

9.2 Control unit valve connection

⚠️ • **Use ARAG valves: use of unsuitable valves not provided by ARAG automatically voids the warranty.**
ARAG is not liable for damage to the equipment, persons or animals caused by failure to observe the above instructions.
• **All valve connectors must be provided with seals before being connected (Fig. 16).**
• **Make sure the seals are correctly fitted to avoid water infiltration when using the control unit.**

Connector 1 shall control the valve which in turn is connected to the **section 1**, and so on with the other valves.
Connect "**connector 1**" to "**valve 1**" and then the other connectors with increasing numbers from left to right: **section 1 is the furthest from the machine on the left, looking at the machine from the rear side** (Fig. 15)**.**
Fig. 15

Fig. 16

Fix the connectors to the relevant valves according to the initials indicated in your assembly general diagram (7.1 System recommended composition):
• Remove the protection cap (**1**, Fig. 16) from the electric valve.
• Place the seal (**2**) onto the connector (**3**), and push the connector fully on (**4**): **be careful not to bend the contacts upon insertion on the valve**.
• Tighten the screw (**5**) fully home.

✋ **In case there are more monitor switches than section valves, connect the cables as indicated in the table:**

SECTION VALVE NO.	SWITCHES TO BE USED	CABLES TO BE CONNECTED TO THE SECTION VALVES
2	2 - 4	2 - 4
3	2 - 3 - 4	2 - 3 - 4
4	1 - 2 - 4 - 5	1 - 2 - 4 - 5

9.3   Hydraulic valve connection
Fig. 24

Bravo 180S can control up to 7 hydraulic functions through double-acting valves.

Fix the connectors to the relevant valves according to the initials indicated in your assembly general diagram (7.1 System recommended composition).

• Position seal (**1**) onto connector (**2**), then connect the latter pressing it fully home (**3**):
during this operation, take special care not to bend valve electric contacts.
• Insert screw inside connector, and screw it (**4**) until it is tightened.

The function of each switch on the hydraulic function control panel is described below.

• Connect the connector marked with "DD" to the pilot valve, and then the other connectors, as specified on the table:

CONTROL	MOVEMENT		CONNECTOR
Section movement / AUX switch opening 1 - 4	Opening	⇧	**1 ÷ 4 A**
	Closing	⇩	**1 ÷ 4 C**
Boom height	Opening	⇧	**AA**
	Closing	⇩	**AC**
Boom locking	Opening	⇧	**BA**
	Closing	⇩	**BC**
Boom leveling	Opening	⇧	**CA**
	Closing	⇩	**CC**

9.4   Connection of sensors and other available functions

Fix the connectors to the relevant functions according to the initials indicated in your assembly general diagram (par. 7.1).

Harness cables are marked with a symbol denoting their functions: please see the table for correct harness connection.

⚠ **Use ARAG sensors: use of unsuitable sensors not provided by ARAG automatically voids the warranty.**
ARAG is not liable for damage to the equipment, persons or animals caused by failure to observe the above instructions.
ITEM	CONNECTION
F	Flowmeter
M	Pressure sensor
R	Foam marker
S	Speed sensor
X	Level sensor
P	Control valve
G	Main valve

- The products are supplied with the sensor installation instructions.

- Connection of:
• flowmeter;
• pressure sensor;
• level sensor
• foam marker.

All ARAG sensors use the same type of connector. Connect the sensor connector to the relevant harness; make sure it is correctly fitted and push it until locking it.

Fig. 17   *Fig. 18*
9.5   Pen drive

The pen drive may be used to exchange data with the BRAVO 180S computer.

✋ **Before using it make sure the pen drive is not protected.**
All pen drives with up to 8 GB memory are compatible.

10 SETUP

10.1 Computer switching on/off

• Ordinary switching on

Software version

Esc

Bravo 180s

17

11   ADVANCED SETUP

The computer can be set-up with the all data required to ensure a correct distribution of the treatment product.
This operation must be done once only, **when installing the computer**.

11.1   Tests and checks before programming

⚠ **Before computer setup, check:**
• **that all components are correctly installed (control unit and sensors);**
• **the correct connection to the power source;**
• **the component connection (main control unit and sensors).**

Failure to correctly connect system components or to use specified components might damage the device or its components.

ACCESS TO ADVANCED MENU

Fig. 26

Advanced setup (with computer off)
• Contemporaneously press the key sequence until switching on the Bravo.
• Release the key **ESC** by keeping the arrow keys pressed until the menu is displayed.

✋ **For a correct use of the keys during setting, refer to par. 10.2.**
The minimum and maximum values relevant to the data that can be set are indicated in chap. 16.

    5

Fig. 30

Set the number of installed section valves.

11.5   Total boom width

This parameter represents the nozzle actual spraying range on the ground: for example, by positioning 8 nozzles at a distance of 50 cm one from the other, the boom section width to be set is 4.00 m.
The displayed value (Fig. 31) represents the sum of the section width values, therefore to change the parameter it is necessary to set the width of each boom section: the sum of the width values will be re-calculated automatically.

1 After selecting the menu Total boom width, press ☐K to gain access to the sub-menu to select / modify the single sections.

2 Use the keys to scroll the sections in the sub-menu Section until viewing the section to be modified: the section number is indicated on the top right side of the display, whereas the first line shows the current value (Fig. 32).

3 Press ☐K to confirm the access to the modification function.

4 Enter the section width value and repeat the setting procedure for each section.

    Total boom width

11.7   Speed sensor

```
Speed sensor
...
```

OK
Fig. 35

In this menu carry out all settings to calculate the speed.
Usually the computer calculates the information concerning the speed thanks to pulses received by the sensor installed on the wheel.
If a GPS receiver is directly connected to the Bravo 180S, this menu allows selecting the receiver as alternative source to the wheel sensor, and so to receive in real time the speed data provided by the GPS.

After selecting the menu Speed sensor, press OK to access the sub-menus.

> Wheel

This parameter is used by the BRAVO 180S computer to calculate the vehicle driving speed and, according to this, the instantaneous application rate.
The wheel constant relates to the type of wheel being used and the number of detection points of the sensor installed on it. BRAVO 180S can save 3 different wheel constants.
In case of replacement of the wheel featuring the detection points of the speed sensors, the wheel constant can change.
In this case it is necessary to set the parameter again.

1 Select the wheel type (3 types available).
2 Press OK. The constant can be entered with two different procedures (Manual setup or Automatic calc.), described below.
3 Select the desired procedure and press OK to enter the constant.

```
Wheel           1/3
50.00 cm/pls
```

Type of wheel

```
Wheel constant
Manual setup
```

```
Wheel constant
Automatic calc.
```

Fig. 36

Fig. 37

4a Manual setup

```
Wheel           1/3
50.00 cm/pls
```

Fig. 38

Take measurements with tyres at the operating pressure.

Allows to enter the wheel constant value calculated with the suitable formula.

$$K_{wheel} = \frac{\text{distance traveled (cm)}}{\text{no. of detection points} \times \text{wheel rpm}}$$

<distance traveled> distance expressed in cm covered by the wheel along measurement travel.
<no. of measurement points> number of measurement points
(e.g. magnets, bolts, etc.), mounted on wheel.
<no. of wheel revolutions> number of wheel revolutions required to travel measurement distance.

The wheel constant can be calculated with a good approximation by detecting the distance traveled by the wheel with the speed sensor.
(The longer the distance traveled, the more accurate wheel constant calculation).

4b Automatic calc.

```
Go ahead!        100 m / 300 feet
        0 pulses
```
OK

Fig. 39

```
Wheel           1/3
51.02 cm/pls
```

Fig. 40

BRAVO 180S can automatically calculate the wheel constant using the number of pulses sent by the speed sensor when driving on a 100 m (EU) / 300 feet (US - US TURF) straight path.

- After selecting Automatic calc. (point **3**), the display indicates that it is possible to move forward with the vehicle.
- Cover the requested distance: the number of pulses will increase during the path. Stop the tractor at the end of the distance.
- Press OK to stop the counting. The computer will indicate the calculated constant.
Wheel constant has been saved.

Take measurements with tyres at the operating pressure.
This test must be performed on medium-hard terrain; for application to very soft or very hard terrain, rolling diameter may vary, leading to inaccurate output calculation; when this is the case, repeat the procedure.
During the test cover the distance with the tank filled up to half capacity with water.

! Error!

Alarm displayed during the automatic calculation: repeat the procedure, calculation not valid; the error can occur even if the wheel has been replaced in a wrong way or if the sensor is too far from the detection points.
In this case check the sensor installation and repeat the procedure.
If the problem persists, contact the installer.

> GPS source

```
GPS source
No
```
Fig. 41

> No
  Yes

With option Yes, the computer is preset to receive speed data from the GPS receiver directly connected to the auxiliary port.

11.8   Valves

Valves
...

Fig. 42

Set the type of valves installed on the system and the relevant data.
After selecting the menu Valves, press **OK** to gain access to the sub-menus.

> Section valves: indicate the type of installed section valves.
   2-Ways: valves without calibrated backflows
   3-Ways: valves with calibrated backflows

> Sections manag.
Indicate the section valve operation mode, especially if the section automatic closing is active when the main control valve is closed.

   Manual (P Mode)
   Auto (M Mode)

• **"P" operation mode (option** Manual**):**
The section valves are controlled independently.
Main switch control functions do not affect section valve opening or closing.
• **"M" operation mode (option** Auto**):**
The section valves are closed or opened acting on the main switch provided the section valve specific switch is in the correct position, i.e. if the section switches are set to OFF (lever down), acting on the main switch the sections will not be controlled.
If one or more section valve switches are set to ON (lever up), opening or closing the main switch opens or closes the section valves as well.

> Regulation: indicate the type of installed control valve.

2-Ways   3-Ways

> Main: indicate the type of installed main control valve.
   2-Ways: drain valve (valve TYPE - Arag 463 series)
   3-Ways: main valve (valve TYPE - Arag 464 - 471 series)

11.15   Tank source
```
Tank source
Manual
```
Fig. 49

In this menu select a tank level reading mode.
The management of the Tank source, described in par. 11.16, will be different according to the selected mode.

Possible options:
> Manual
  Level Sensor

The level sensor installed in the system allows displaying the tank level in real time.

🖐 **This mode operates correctly ONLY if the level sensor has been calibrated, or if the calibration of a similar tank has been loaded from pendrive.
The procedure is described below, under section Tank profile > Load.**

◀ ▶ Shifting of the cursor	▼ ▲ Menu item scrolling or Data increase/decrease	OK Confirms access to menu or data change	Esc Quits the menu or the data change	Par.10.2

11.16   Tank Setup

```
Tank Setup
ˌ ˌ ˌ
```
Allows to set data relevant to the tank.
After selecting the menu Tank Setup, press OK to gain access to the sub-menus.

Fig. 50

> Tank volume **(can be modified only in mode** Tank source > Manual**)**
This parameter sets the quantity of fluid the tank can contain: it indicates the maximum quantity of fluid that can be filled in the tank by the user.
If there is a level sensor, the computer displays the tank capacity calculated after the calibration.

> Tank reserve
This parameter sets the "reserve" value below which the computer triggers a visual and acoustic alarm: when the reserve value is reached during the spraying, the tank symbol (Fig. 51) blinks on the display.

```
300 l/ha     ▣
12.2 km/h
```
🖐 **The acoustic alarm stops when the tank is completely empty.**

Fig. 51

> Calibration ***** : enters the calibration procedure of the level sensor.

12.1 Jobs setup

In this menu it is possible to set 10 different types of treatments.

```
Job          1/10
   300 l/ha
```
Job number

Fig. 57

- First select the job to be set (Fig. 57).

```
Rate Type*
Constant
```

Fig. 58

- After selecting the job, the computer automatically passes to the setting screen of Rate Type* for the selected treatment (Fig. 58):
Constant: Bravo 180S carries out the treatment by keeping the set application rate.
Variable: with the Variable option, BRAVO 180S changes the output according to the data sent by the Skipper satellite navigator (duly connected), that indicate the exact quantity of fluid to be sprayed in each point of the field.

- Press OK to automatically pass to the setting screen of the other parameters (Fig. 59).

*** MENU VISIBLE ONLY WITH SPECIFIC SETTINGS:
TO VIEW IT, ENABLE THE INDICATED OPTION.**

Variable rate   ✔ par. 11.6

```
(01)    100 l/ha A
   ISO* Orange C**
   B**
```
Job number

Fig. 59

A Set application rate: set the application rate for the selected treatment.
B** Type of nozzle: set the type of nozzle (ISO or USR).
C** Nozzle: select the nozzle among those available in the ISO or USR type.

The RATE key allows passing from one setting to the other; the value that can be modified blinks.
Press OK, in this screen, to confirm the setting of the entire job and automatically go back to the job selection (Fig. 57).

- Repeat the setup FOR EACH job (set the used types and disable the others).

**** MENU VISIBLE ONLY WITH SPECIFIC SETTINGS:
TO VIEW IT, ENABLE ONE OF THE INDICATED OPTIONS.**

```
Job 03
Reset?
```
Fig. 80

1 In the Spraying Menu, keep the key pressed to gain access to the job selection section.
2 Press to scroll the pre-set jobs.
3 Press the keys at the same time until viewing the message Reset?
4 Press OK to confirm the reset.

◄ ► Shifting of the cursor	▼ ▲ Menu item scrolling or Data increase/decrease	OK Confirms access to menu or data change	Esc Quits the menu or the data change	📖 Par.10.2

14.3 Application rate regulation

Bravo 180S regulates the chemical products output in two different ways.
Press the AUTO key to select the desired mode: the type of active regulation during the job will be displayed.

14.3.1 Automatic operation *(DEFAULT)*

Bravo 180S keeps the set application rate constant regardless of the changes in speed and boom section status.

If necessary, during spraying, it is possible to intervene on the dedicated switch to adjust output to crop conditions, increasing or decreasing momentarily the application rate up to ±50%.

Press RATE to restore the set output value.

1 Enable the automatic operation.

2 Open the desired section valves.

3 Position the tractor at the beginning of the field to be sprayed.

4 Turn the main switch to ON.

5 Start the treatment.

6 Use the control valve switch to temporary change the application rate.

Par.13.2.1 Keys to check the computer and the spraying phases
Par.13.2.2 Operating switches for control unit valves
Par.13.2.3 Operating switches for hydraulic valves
Par.13.1 Display

Fig. 81

14.3.2 Manual operation
Rate manual regulation shall be carried out with the suitable switch.

1 Enable the manual operation.

2 Open the desired section valves.

3 Position the tractor at the beginning of the field to be sprayed.

4 Turn the main switch to ON.

5 Start the treatment.

6 Use the control valve switch to adjust the desired quantity.

Par.13.2.1 Keys to check the computer and the spraying phases
Par.13.2.2 Operating switches for control unit valves
Par.13.2.3 Operating switches for hydraulic valves
Par.13.1 Display

Fig. 82

14.4 Automatic closure of the main valve (through SKIPPER)

BRAVO 180S can automatically switch off main valve through SKIPPER: the navigator can autonomously manage valve opening and closing, thus preventing the overlapping of already-sprayed areas.

To use the automatic closure, connect SKIPPER to BRAVO 180S and carry out the AUTOMATIC operation procedure (par. 14.3.1): for further information, refer to the user's manual supplied with the SKIPPER satellite navigator.

WARNING: automatic closing is NOT active during manual operation.

14.5   Output menu

This menu contains the description of the functions available during the treatment.

A sub-menu is available for almost all data; to gain access to it press keys ▲ and ▼ at the same time for 1 second.

• Instantaneous speed indication

```
    300 l/ha
Speed
```

Fig. 83

```
Speed simul.
Yes
```

The driving speed simulation allows spraying the product even without a speed sensor installed on the wheels.
The simulation is set to 6 km/h and can be varied by keeping ☐ K key pressed and pressing keys ▲ and ▼.
With this function the application rate can not be the real one since the speed can not be detected.

• Pressure indication

```
    300 l/ha
Pressure
```

Fig. 84

```
Reset?
    0.2 bar
```

Activate the "zero" calibration procedure of pressure sensor.
In case a pressure value is displayed **despite the absence of pressure inside the circuit** , it is necessary to perform zero setup of the sensor.
- Press ☐ K to reset the pressure sensor residual signal.

[!] Check sensor!

Faulty pressure values detected: check the transducer operation. If problem persists, check for residual pressure in the system.

• Instantaneous rate indication

```
    300 l/ha
Flow
```

Fig. 85

• Covered area count

```
    300 l/ha
Area
```

Fig. 86

• Sprayed fluid count

```
    300 l/ha
Sprayed qty
```

Fig. 87

• Tank level*

```
    300 l/ha
Tank level
```

Fig. 88

```
Tank level
    01
```

It accesses the tank filling function (par. 14.5.1).

• Operation time calculation*

```
    300 l/ha
Time
```

Fig. 89

• Traveled distance count*

```
    300 l/ha
Distance
```

Fig. 90

* This menu item is displayed only if the EXTENDED view mode of the spraying menu is selected (par. 11.17).

14.5.1   Tank filling

```
Master OFF
Tank level
```

Fig. 91

1 From the Spraying Menu, press until selecting Tank level.
2 Press the keys at the same time to access the tank filling procedure.

The filling will be managed in different ways according to the mode preset in the menu Tank source (par. 11.15).
Possible options:
- Manual (**3a**)
- Level Sensor (**3b**)

TANK LEVEL - MANUAL MODE

```
Tank filling
     1200 l
```

Fig. 92

From point **2** pass to menu Tank filling
BRAVO 180S displays the tank capacity: the value has been set in advanced setup.

3a Set the real quantity of fluid filled in the tank.
4a Press □K to confirm the data.

It is not possible to set values higher than tank total capacity.

TANK LEVEL - LEVEL SENSOR MODE

```
Tank level
       0 l
```

Fig. 93

From point **2** pass to screen Tank level.

3b Press to scroll through the items:

Tank level
BRAVO 180S displays the real quantity of fluid inside the tank, detected by the level sensor.

Filled qty
Start the filling pump and stop it at the end of the filling procedure.
When the level sensor is connected, the display shows the filling data in real time.

15 MAINTENANCE / DIAGNOSTICS / REPAIRS
15.1 Operation errors

The indicated messages blink alternatively

```
Machine stopped!
     0.0 km/h      A
```

```
        0.0 l/ha
     0.0 km/h      A
```

Fig. 94

📖 Par.	JOB MODE	MESSAGE ON DISPLAY / CAUSE	REMEDY
13.2.2	MAN. + AUTO	Disable Main Main switch ON upon computer switching on	• Move main switch downwards (position OFF).
13.2.2 14.3.1	AUTO	Machine stopped! Main switch ON with machine stopped	• Start the farming machine. • Move main switch downwards (position OFF).
14.3.1	AUTO	Missing flow! Main switch ON with machine stopped but rate at zero	• Start the pump and move the farming machine.
11.9 14.3.1	AUTO	Slow down! The rate does not reach the value required for output	• Decrease the farming machine speed. • Check that the flowmeter constant value has been set correctly.
11.9 14.3.1	AUTO	Accellerate! The flowrate exceeds the value required for output	• Increase the farming machine speed. • Check that the flowmeter constant value has been set correctly.
11.11 14.5	MAN. + AUTO	Check sensor! Faulty pressure values have been detected	• Check the pressure sensor status and make sure there is no residual pressure in the system.
7.2 11.16	MAN. + AUTO	USB not found The pendrive is not inserted correctly	• Turn off the computer and check the insertion of the pendrive.
--	MAN. + AUTO	Error! • The pendrive is blocked	• Switch off the computer and release the pendrive.
		• The pendrive has not free space	• Space needed for new information: delete the unnecessary files from the pendrive.
12.11	MAN. + AUTO	File not found (SETUP.BIN) The computer configuration has not been saved	• Save the data.
11.16	MAN. + AUTO	File not found (TANK.TKL) The tank configuration has not been saved	• Save the data.
11.16 12.11	MAN. + AUTO	Wrong file • The file relevant to the computer configuration (SETUP.BIN) is faulty. • The file relevant to the tank configuration (TANK.TKL) is faulty.	• Try to save the data again.
7.1 7.2	MAN. + AUTO	GPS timeout • Wrong cable connection for receiver • The receiver connection cable is damaged • The receiver is damaged	• Check connection to receiver. • Replace the cable. • Replace the receiver.

15.2   Troubleshooting

FAULT	CAUSE	REMEDY
The display does not switch on	No power supply	• Check power supply connection **(par. 8.2)**.
	Computer is OFF	• Press the ON key.
Valve controls take no effect	Valves not connected	• Connect the connectors **(par. 9.2)**.
One valve does not open	No power supply to valve	• Check valve electric connection and operation.
The display no longer shows the speed	Wrong setup	• Check the setup of the wheel constant **(par. 11.7)**.
	No signal coming from the speed sensor	• Check connections to speed sensor **(par. 9.4)**.
The displayed speed is not precise	Wrong setup	• Check the setup of the wheel constant **(par. 11.7)**.
Output volume readout inaccurate	Wrong setup	• Check the setup of the boom width **(par.11.5)**. • Check the setup of the flowmeter constant **(par. 11.9)**. • Check the setup of the wheel constant **(par. 11.7)**. • Check the setup of the section valve type **(par. 11.8)**. • Check connections to speed sensor **(par. 9.4)**.
Covered area count displayed does not match actual distance covered	Wrong setup	• Check the setup of the boom width **(par. 11.5)**. • Check the setup of the wheel constant **(par. 11.7)**. • Check connections to speed sensor **(par. 9.4)**.
	The totalizer has not been reset	• Reset the totalizer **(par. 14.2)**.
Distance traveled count displayed does not match actual distance covered	Wrong setup	• Check the setup of the wheel constant **(par. 11.7)**. • Check connections to speed sensor **(par. 9.4)**.
	The totalizer has not been reset	• Reset the totalizer **(par. 14.2)**.
Sprayed fluid count displayed does not match litres/gpm actually sprayed	Wrong setup	• Check the setup of the flowmeter constant **(par. 11.9)**. • Check the setup of the section valve type **(par. 11.8)**.
	Use of three-way section valves without setting calibrated backflows	• Perform setting.
	The totalizer has not been reset	• Reset the totalizer **(par. 14.2)**.
Unable to reach output volume value set for the automatic operation	Wrong setup	• Check application rate setup **(par. 12.1)**. • Check the setup of the boom width **(par. 11.5)**.
	System not adequately sized to provide required rate	• Check maximum pressure valve adjustment. • Make sure control valve is adequate for specific system.
	Control valve malfunction	• Check valve operation.
Instantaneous pressure readout inaccurate	Wrong setup	• Check full scale setup for pressure sensor **(par. 11.11)**. • Check the settings of the nozzles being used **(par. 12.1 - 11.14 - 11.5)**.
	Pressure sensor not calibrated	• Perform the calibration **(par. 14.5)**.
	Pressure sensor wrong installation	• Check connections to pressure sensor **(par. 9.4)**.
Instantaneous pressure is not displayed	Wrong setup	• Check pressure sensor setting **(par. 11.11)**.
	Computer does not receive signals from pressure sensor	• Check connections to pressure sensor **(par. 9.4)**.
	Pressure sensor wrong installation	• Check connections to pressure sensor **(par. 9.4)**.
The displayed tank level is not precise	Level sensor not calibrated	• Perform the calibration **(par. 11.16)**. • Calibrate the level sensor again **(par. 11.16)**.
	Level sensor wrong installation	• Check connections to level sensor **(par. 9.4)**.
During the tank calibration procedure, the sprayed quantity is always steady on zero	Wrong installation / no flowmeter installed.	• Check connections to the flowmeter **(par. 9.4)**. • Install the flowmeter **(par. 7.1)**.
	Section valves and main control valve set to **OFF**.	• Take section valves and main control valve to **ON (par. 13.2.2)**.

15.3   Cleaning rules

- **Clean only with a soft wet cloth.**
- **DO NOT use aggressive detergents or products.**
- **DO NOT clean equipment with direct water jets.**

Description	
Display	Alphanumeric LCD 2 lines x 16 characters, backlit
Power supply voltage	11 ÷ 14 Vdc
Consumption (valves excluded)	150 mA
Operating temperature	0°C ÷ 60 °C +32°F ÷ +140 °F
Digital inputs	for open collector sensors: max 2000 imp/s
Weight	800 g - Bravo without hydraulic controls 1140 g - Bravo with hydraulic controls (without harness)
Protection against polarity inversion	•
Protection against short-circuit	•

17 END OF LIFE DISPOSAL

Dispose of the system in compliance with the established legislation in the country of use.

18 GUARANTEE TERMS

1. ARAG s.r.l. guarantees this apparatus for a period of 360 days (1 year) from the date of sale to the client user (date of the goods delivery note).
   The components of the apparatus, that in the unappealable opinion of ARAG are faulty due to an original defect in the material or production process, will be repaired or replaced free of charge at the nearest Assistance Center operating at the moment the request for intervention is made. The following costs are excluded:
   - disassembly and reassembly of the apparatus from the original system;
   - transport of the apparatus to the Assistance Center.
2. The following are not covered by the guarantee:
   - damage caused by transport (scratches, dents and similar);
   - damage due to incorrect installation or to faults originating from insufficient or inadequate characteristics of the electrical system, or to alterations resulting from environmental, climatic
     or other conditions;
   - damage due to the use of unsuitable chemical products, for spraying, watering, weedkilling
     or any other crop treatment, that may damage the apparatus;
   - malfunctioning caused by negligence, mishandling, lack of know how, repairs or modifications
     carried out by unauthorized personnel;
   - incorrect installation and regulation;
   - damage or malfunction caused by the lack of ordinary maintenance, such as cleaning of filters, nozzles, etc.;
   - anything that can be considered to be normal wear and tear.
3. Repairing the apparatus will be carried out within time limits compatible with the organizational needs of the Assistance Center.
   No guarantee conditions will be recognized for those units or components that have not been previously washed and cleaned to remove residue of the products used.
4. Repairs carried out under guarantee are guaranteed for one year (360 days) from the replacement or repair date.
5. ARAG will not recognize any further expressed or intended guarantees, apart from those listed here.
   No representative or retailer is authorized to take on any other responsibility relative to ARAG products.
   The period of the guarantees recognized by law, including the commercial guarantees and allowances for special purposes are limited, in length of time, to the validities given here.
   In no case will ARAG recognize loss of profits, either direct, indirect, special or subsequent to any damage.
6. The parts replaced under guarantee remain the property of ARAG.
7. All safety information present in the sales documents regarding limits in use, performance and product characteristics must be transferred to the end user as a responsibility of the purchaser.
8. Any controversy must be presented to the Reggio Emilia Law Court.
